

N200

I purchased my 3 element SteppIR Yagi with 30/40m dipole upgrade and passive 6 meter element in 2006. Without a doubt, this has been the best antenna that I ever owned.

The features that drew me towards making the decision to purchase this antenna, was being able to have one antenna that is resonant on every band from 40 through 6 meters. Add to this the fact that on 20 through 10 meters, you can do a fast “reverse” to listen/transmit in the opposite direction in seconds, or even select bi-directional.

A benefit that I didn't realize at the time, was how much better the dipole antenna worked on 40 and 30 meters than any of my tree hung wire antennas. There is something to be said for a dipole being high and in the clear as is the case with the SteppIR on 40-30.
