

I have 2 SteppIR Yagis in Arizona, one is a 4 element Yagi purchased in June of 2006, resting on a 55' tower on the edge of a hill. Running 200 watts, the world hears me! This Yagi endured very high winds with 80 mph gusts in 2021 without issue. My other SteppIR is a 3 element Yagi with the 30/40 dipole on it in the Phoenix area, works wonders at 55 ft. I am more than sold on SteppIR products – I think my on-air bragging about my antenna has sold a lot of them!
