

“

I purchased a 4el SteppIR Yagi in early 2005. It has been the greatest antenna I've ever owned. In 2020 I had to take the antenna down due to a coax issue, NOT an antenna issue.

The SteppIR tested great on the ground but being 15 years old, and even without having any trouble at all with it, I decided to have all the EHU's rebuilt. I wanted it to last another 10 to 15 years and decided to do the work while the antenna was on the ground. I was able to watch some of the work being done to the EHU's at the SteppIR factory, by the technicians – who were very professional and did great work.

I use the SDA 100 and the 180 degrees / BI-Dir is the greatest rotor saver ever. This SteppIR has helped me achieve my 5 Band DXCC on 10,15,20 meters with high power and never, ever a problem.
