

“

My first SteppIR antenna was the BigIR vertical, 40m through to 6m which I still have and am still using after 19 years. I then bought a 3 element beam in 2006 - the one with the straight elements - which I am also still using.

I have had great success with both these antennas. The 3 element SteppIR is mounted on a 40 ft telescopic tilt-over tower which I lower to 25 ft during our higher winds. I have attached some weather summaries here on the Falkland Islands, from our local newspaper - to give a flavour of our wind conditions.
