

As a true amateur in our hobby of ham radio, I understand two details about antenna's. An antenna needs to be efficient and resonant. For these reasons my decision to investment in the SteppIR DB18E was an easy one.

My experience with my order, delivery and after-sales support from SteppIR was flawless. I particularly appreciated the after-sales support was with genuine follow through from the SteppIR team.

The manual offered one particular detail that was crucial to the Antenna. **Do not organize a BBQ to put together this antenna!!** – It took me the best part of a week to build my DB18E and have never looked back at this investment in time as anything but good.

The DB18E allows me to work all bands 40-6 with little rotation and excellent performance. It operates as well as my former 6 element tri-band for 20/15/10.

*I use the antenna often in bidirectional mode for local use.
This is an excellent option.*

My DB18E has been up for over 7 years with faultless operation. Thank you John, and the SteppIR team for an excellent product!
