

N6SJ

I have been very happy with my DB42. I put it up around 10 years ago and it has been solid as a rock. No problems with it at all I crank the tower down to around 40 feet when the winds pick up here near the Pacific Ocean, but I can still work long haul DX at that height on the higher bands. Recently it allowed me to work 3Y0J on Bouvet Island on 17 and 30 Meters. It's so wonderful to have 3 elements on 40 meters! The 180-degree mode is great for checking Long Path. Assembly took a while, and I had a few suggestions for clarifying the assembly instructions, but the telephone support was excellent. I'd recommend the DB42 to anyone!
