

CLIENT TESTIMONIAL

WB6NNR

I have a BigIR vertical at a remote HF station in the sparsely populated Northern Plains of Colorado. The antenna has been superb through snow, ice, power outages, etc. I run three remote radios stations, but I usually pick the station with the BigIR when I want the best antenna for receiving. SteppIR customer service has been outstanding also. I had a few questions during assembly and then everything has been fine since the installation. I would highly recommend this antenna. It's the first time I have ever been able to operate a vertical that effectively was this broadband thanks to the stepper motor tuning – and I always have a great SWR! Keep up the good work.
