

“

50 years after I bought my Drake TR 4C and 30 years after I put up a tribander on a 56 foot tower, it was time to upgrade.

Several good friends have been using various SteppIR antennas for over a decade and highly recommended that I take a look at this antenna option.

The QST review and YouTube videos were also positive and very useful. My ham buddies assured me that with careful planning and patience the assembly would be straightforward. They were right.

With the help of some younger folks, it went up effortlessly. The improvement on the WARC bands and 40 m compared to the previous wire has been dramatic.

Breaking 20m pileups with 500 watts is now routine. The flexible bi-directional and 180 modes are now considered indispensable. No regrets, on year later!
